1 Problem Statement

The objective of this project is to analyze the sales performance of Zepto products across different business dimensions such as Category, Customer Segment, Region (City), and Payment Method.

The project aims to identify:

- Product performance across categories.
- Customer purchasing behaviour.
- Regional sales performance.
- Preferred payment methods.
- Monthly sales trends and seasonal patterns.
- Areas where business improvements can be made.

The insights obtained from this analysis help management make informed business decisions to increase revenue, improve customer satisfaction, and optimize operations.

2 Dataset Description

The dataset consists of transactional sales records collected from Zepto.

Dataset Attributes

Column	Description
Order ID	Unique order identification number
Order Date	Date on which the order was placed
Customer Name	Name of the customer
Customer Segment	Customer category
City	Delivery city
Category	Product category
Product Name	Product purchased
Quantity	Number of products ordered
Price	Price of each product
Discount	Discount applied

Tax	Tax collected
Total Revenue	Final order value
Payment Method	Mode of payment
Refund Amount	Amount refunded

3 Data Cleaning Process

Before creating the dashboard, the dataset was cleaned to improve data quality.

The following preprocessing steps were performed:

- Removed duplicate records.
- Checked and handled missing values.
- Standardized city names and product categories.
- Corrected inconsistent text formatting.
- Converted date columns into proper Date format.
- Verified numerical columns such as Revenue, Tax, Quantity, and Refund Amount.
- Extracted Month from Order Date for trend analysis.
- Created Pivot Tables for dashboard visualizations.
- Validated totals using Excel formulas.

4 Dashboard Design

The dashboard summarizes important business metrics using KPI cards and charts.

Key Performance Indicators (KPIs)

- Total Orders
- Total Customers
- Total Revenue
- Total Tax
- Refund Amount

Dashboard Charts

1. Sales by Cities
2. Monthly Sales Trend
3. City Contribution
4. Payment Method Analysis
5. Sales by Category

5 Key Insights

Category Analysis

- Fruits and Vegetables contribute significantly to overall sales.
- Bakery and Snacks contribute comparatively lower revenue.
- High-performing categories should receive priority inventory.

Regional Analysis

- Bangalore generates the highest sales.
- Delhi performs similarly with strong sales.
- Mumbai contributes moderately.
- Some regions have very low sales and require marketing efforts.

Customer Segment Analysis

- Regular customers generate most of the revenue.
- Premium customers have higher average purchase values.
- Customer segmentation helps design personalized promotions.

Payment Method Analysis

- UPI is the most preferred payment option.
- Digital payments dominate customer transactions.
- Cash on Delivery is less frequently used.

Monthly Trend Analysis

- Sales fluctuate throughout the months.
- Seasonal demand influences purchasing behaviour.
- Promotional campaigns increase monthly sales.

Refund Analysis

- Refund amounts indicate possible delivery or product quality issues.
- Reducing refunds can significantly improve profitability.

6 Business Recommendations

Based on the analysis, the following recommendations are proposed:

1. Increase inventory for high-demand categories.
2. Introduce offers for low-performing products.
3. Expand marketing campaigns in low-performing regions.
4. Improve customer loyalty through personalized rewards.
5. Promote digital payment incentives.
6. Improve product quality to reduce refunds.
7. Improve packaging and delivery efficiency.
8. Plan inventory based on seasonal demand.
9. Monitor monthly sales trends continuously.
10. Use dashboard insights for strategic decision-making.

7 Conclusion

The Zepto Sales Analysis dashboard provides valuable insights into business performance by analyzing sales across product categories, customer segments, regions, and payment methods.

The dashboard helps management identify top-performing products, understand customer purchasing behaviour, monitor sales trends, reduce refund rates, and optimize inventory planning.

By implementing the suggested business recommendations, the company can improve operational efficiency, increase customer satisfaction, and achieve sustainable revenue growth.
